

Choose the planet.

Our groundbreaking natural materials put the power to do good in everyone's hands.

What makes Morro™ materials so unique?

Our ground-breaking natural materials make it simple to do the right thing for the planet. With a range of products from microencapsulation to flexible films, from coatings to food and drink fortification, we put the power to do good in everyone's hands.

Fully biodegradable in the natural environment

A drop in solution

Not chemically modified

Vegan & gluten-free

Made from abundant feedstocks

morro™

morro.earth

Our ground-breaking natural materials make it simpler to do the right thing for the planet.

Morro™ Coating.

Our natural coating replaces “forever chemicals” and plastic coatings on paperboard packaging, as a fully biodegradable and food safe material. Enabling brands to futureproof against incoming regulation, and providing the plant-based solution consumers are searching for.

Morro™ Edible Film.

Flexible films are amongst the most polluting plastics. But what if you could not only replace single-use packaging, you could eat it too? Used to wrap a range of products, this food grade natural packaging presents an entirely new experience for consumers.

Morro™ Micro.

Designed to make fragrance last longer, microscopic plastic capsules are hidden in many home and personal care products. Morro Micro replaces these fragrance microcapsules in products with a natural, plastic-free alternative.

Morro™ Nutri.

Morro Nutri facilitates the fortification of vitamins and nutrients in food and drink. This exciting innovation enables customers to get additional health benefits from their favourite products, without changing the taste or texture.

Morro™ Soluble Film.

Morro Soluble Film is made from plants and offers a natural alternative to traditional plastic films like PVOH. A drop-in solution means no changes are required to manufacturing processes, allowing for a seamless switch to plastic free packaging.
